United States import statistics are compiled from information verified by Customs Examiners on import entries filed with Customs by importers. Under the direction of Lester D. Johnson, Acting Commissioner of Customs, the primary responsibility for the verification of import statistical information is assigned to the field and headquarters staff of the Division of Appraisement Administration.

SUGGESTED BRIEF CITATION

U.S. Bureau of the Census. U.S. Imports of Merchandise for Consumption, Report FT 125, January 1965. Washington, D.C. May 1965.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 or any Department of Commerce field office. Price: $10 per year domestic, $2.25 additional for foreign mailing, $1.50 single copy.

CHANGES IN CERTAIN SCHEDULE A CLASSIFICATIONS UNDER WHICH U.S. IMPORT STATISTICS ARE PRESENTED, EFFECTIVE JANUARY 1965

Effective with the import statistics for January 1965, certain changes have been made in Schedule A; data in Report FT 125 are presented in terms of the applicable changes beginning with the January 1965 issue. Before referring to data in the report, users are advised to check table I below in order to determine whether any commodities in which they are interested have been affected by a change and, if so, the nature of the particular change. (Table II, below, contains a list of descriptions for those Schedule A classifications established as of January 1965.)

In addition to those changes noted below, users of the statistics will find that the description for some of the Schedule A classifications in this report have been changed from those used in prior issues. However, unless the classification is listed in the table I below, its coverage as represented by the assigned TSUSA numbers remains as it was previously. Description changes have been made in these cases merely for purposes of clarification, to correct errors in the original description, or to provide more comparable descriptions for individual 3- or 4-digit categories identically numbered both in Schedule A and in the export classifications and statistics effective with January 1965.

Changes referred to in this announcement are the result in major part of comments and recommendations submitted by users of the statistics in accordance with the Bureau's request for such comments on the Schedule A detail originally shown in the special publication entitled "Changes in Presentation of U.S. Import Statistics Effective 1964." (The deadline was October 1, 1964, for recommending changes to be considered for possible inclusion in the January 1965 revision.)

1964 ANNUAL IMPORT STATISTICS TO BE PUBLISHED IN TERMS OF TSUSA

Import statistics for calendar year 1964 will be published in terms of the Tariff Schedules of the United States Annotated (TSUSA), the 7-digit commodity classification system under which the import statistics are initially compiled. The Schedule A classifications used in presenting statistics in Report FT 125 are a summarization of the TSUSA classifications. The annual TSUSA publication is now scheduled for release during the latter part of May 1965. It will present data on imports for consumption and general imports of merchandise in terms of the full 10,000 TSUSA commodity classifications. The statistics will be in commodity by country of origin arrangement. Sales copies of the publication will be available at the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. An announcement of the price per copy will be made at a later date.

CONSOLIDATION OF REPORTS ON U.S. EXPORTS AND IMPORTS BY AIR

Effective with the 1965 monthly data, the following four air cargo publications will be consolidated into one publication:

FT 380 - U.S. Airborne General Imports of Merchandise, Commodity (Schedule Y) by Country of Origin

FT 390 - U.S. Airborne General Imports of Merchandise, Country of Origin by Commodity (Schedule Y)

FT 780 - U.S. Airborne Exports of Domestic and Foreign Merchandise, Commodity (Schedule X) by Country of Destination

FT 790 - U.S. Airborne Exports of Domestic and Foreign Merchandise, Country of Destination by Commodity (Schedule X)

The new publication will be known as FT 785 - U.S. Exports and Imports by Air. The commodity detail shown in the consolidated publication will be in terms of Schedule Z (which replaces Schedules X and Y) and will replace the four above publications now sold by the Superintendent of Documents, U.S. Government Printing Office.

The yearly subscription service will consist of 12 monthly issues plus a calendar year report, at a cost of $5.00 per year domestic, $1.25 additional for foreign mailing, and 50 cents per single copy. Subscriptions and remittance should be mailed to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402. Checks should be made payable to the Superintendent of Documents.

COMPARABILITY OF COVERAGE BETWEEN THE CLASSIFICATIONS IN SCHEDULE A AND SCHEDULE B

The classifications in this publication are in terms of the new 7-digit Schedule A codes which became effective January 1964 for publishing the import statistics. These 7-digit codes were derived from the Standard International Trade Classification in the same manner as the revised Schedule B codes which became effective January 1965 for use in the publication of export statistics. (For an explanation of how the codes were derived, see the Introductions to the publication entitled "Changes in Presentation of U.S. Import Statistics, Effective 1964" and Schedule B, Statistical Classification of Domestic and Foreign Merchandise Exported from the United States.) The former publication defines the Schedule A classifications in terms of the Tariff Schedules of the United States (TSUSA) classifications included.

In revising the import and export classifications, consideration was given to developing a numbering system which would provide consistency between the two classifications at the most detailed level (7-digit). Although this is a very desirable objective and one that will be pursued further in the future, it was waived during the preparation of the initial issues of the Schedules in order to effect an earlier publication date. As a result, a 7-digit commodity number in this report may well differ in coverage from a classification with the corresponding number in the export statistics. However, comparability between coverage of identically numbered classifications increases as the data are summarized at each higher level and it is believed that for most statistical purposes the coverage at the 1-, 2-, and 3-digit levels is essentially comparable.

The degree to which the data are comparable at other levels of detail can only be measured by reference to the definitions of the classifications and, in the case of imports, to the definitions of TSUSA classifications included in the Schedule A number.

REVISIONS TO CERTAIN TSUSA NUMBERS FOR THE PERIOD SEPTEMBER--DECEMBER 1963

Effective with September 1964 import statistics, imported commodities assembled abroad in whole or in part of products of the United States are included in the import statistics under the same commodity number as if no U.S. product were involved. The TSUSA provides commodity number 807.00 20 for the reporting of the dutiable value of products incorporating U.S. components, and 807.00 40 for the value of the U.S. components. From September 1963 (when the TSUSA became effective) through August 1964 these numbers were used in processing the data for inclusion in the regular import tabulations and the data were omitted from the classifications within which they would have been included if classified by commodity.

Revisions to conform the January-August 1964 data to the type of presentation initiated in September 1964 were issued with the December 1964 tabulations and publications. In order to carry the changed presentation back through September 1963, the date when the TSUSA became effective, a special errata is being presented in this issue of Report FT 125. Normally, the revisions published with the June 1964 issue would have been the last to be issued for 1963 data prior to the publication of Foreign Commerce and Navigation for that year.

Under Schedule A, 1960 Edition, which was used in preparing import statistics prior to September 1963, the statistical handling of imported commodities incorporating U.S. components was not exactly the same as that now in effect, since the value of the U.S. components was reported in Schedule A number 9919 900, but with this exception the value of the article was reported then, as it is now, in the classification where the commodity would be included if no U.S. component were involved.

UNDRESSED MINK FURSKINS OF USSR ORIGIN ERRONEOUSLY REFLECTED IN THE 1964 IMPORT STATISTICS

For the months of July and October 1964, Report FT 125 erroneously reflected current month imports of undressed USSR mink furskins under Schedule A number 212.0025. The reported data and the corrections are shown below:

Schedule A number	Country	Quantity (number)	Value (dollars)
		JULY 1964	
212.0025	USSR		
Reads		3,000	59,006
Delete			
212.0045	USSR		
Reads		11,450	195,522
Should read		14,450	254,528
		OCTOBER 1964	
212.0025	USSR		
Reads		5,148	59,275
Delete			

The July error was occasioned by the incorrect reporting of "undressed sable furskin" imports under the classification for mink furskins. The October statistics represent attempted imports of undressed USSR mink furskins which were immediately seized and denied entry as prohibited merchandise by customs authorities. (The entry, or withdrawal from warehouse, for consumption of mink skins, dressed or undressed, and certain other furskins specified in TSUSA Schedule 1, Part 5, Subpart B, headnote 4 is prohibited as to the products of the USSR or of Communist China.) However, the information on the statistical copy of the customs entry forms prepared to cover the attempted imports was inadvertently included in the statistics.

In addition to this announcement, the corrections will be reflected in the "Revisions To Previous Months' Reports" section of the June 1965 issue of this publication.

POPPY SEED IMPORT STATISTICS FOR 1964 REFLECT ERRONEOUS REPORTING

For the months of March, May, and June 1964, Report FT 125 reflected incorrect current month data for poppy seed imports, Schedule A number 221.0120. The reported data and the corrections are shown below:

	Country of origin	Net quantity (cwt)	Value (dollars)
		MARCH 1964	
Reads	Netherlands	56,938	26,677
Should read		2,762	26,677
Reads	Poland	33,246	7,867
Should read		873	7,867
		MAY 1964	
Reads	Netherlands	74,356	40,475
Should read		2,081	20,475
		JUNE 1964	
Reads	Netherlands	3,156	42,889
Should read		4,040	42,889
Reads	Poland	357	6,349
Should read		654	6,349

The quantity errors are mostly attributable to misreporting in terms of "pounds" rather than "hundredweight" (cwt.) by some importers. The corrections result in a decrease of 157,643 cwt. in the January-December cumulative quantity total for poppy seed imports.

In addition to this announcement, the corrections will be reflected in the "Revisions To Previous Months' Reports" section of the June 1965 issue of this publication.

NOTICE TO USERS WHO DO NOT FIND MONTHLY TSUSA COMMODITY DETAIL IN REPORT FT 125

Monthly U.S. import data in Tariff Schedules of the United States Annotated (TSUSA) commodity by country of origin detail, although not shown separately since January 1964 in published reports for many TSUSA commodities, continue to be readily available, as follows:

1. Quick-copy subscription service, TSUSA by country data for individual TSUSA subparts—

   a) Description of the service.

   Monthly TSUSA by country data will be supplied on a subscription basis in the form of copies of excerpts for individual TSUSA subparts from a machine tabulation (IM 146). The subscription price per subpart is $9.00 for the

12 months, January through December 1965 (somewhat higher for a few of the longer subparts). An order blank may be obtained on request from the Foreign Trade Division, Bureau of the Census, Washington, D.C. 20233.

b) Other features of the subscription service.

(1) The data are in TSUSA sequence, with alphabetic descriptions for TSUSA commodity and for country, similar to those formerly shown in the FT 110. All detail is shown (low value items are not "basketized" under "other countries").

(2) Copies of individual subpart data will be received by subscribers to the quick-copy service within 2 weeks after the first availability of a month's data.

(3) The quick-copy service supplies data in terms of general imports, as well as imports for consumption.

(4) The service makes the complete detail described in (1) above available for the particular commodities of interest to the subscriber at a nominal cost to him.

2. Reference copies of machine tabulation IM 146, showing complete commodity by country of origin detail for all TSUSA numbers in the same form as described above for the quick-copy service, will be available for public reference use from 1 to 2 weeks after the first availability of the data for each month, at the following locations:

SPECIAL REPORTS ARRANGED FOR ON A COST TO SUBSCRIBER BASIS

Special reports contracted for on a cost basis are listed in current publications so that all users of foreign trade statistics may be informed of the type of reports being prepared and the cost involved. These special reports cover foreign trade data in greater detail or in different arrangement than that available in the regularly published statistics, or supply at an early date information which will be published later. The entire cost of the special work required to compile or duplicate the information from the basic data available in the Bureau is charged to the subscriber.

The reports listed below are those which have been initiated since the last published list, covering statistics related to import data. Special reports covering statistics related to other types of foreign trade data are listed in the current foreign trade reports covering such data. Reports previously contracted for are listed in issues of this report and Report FT 110 (published through the January 1964 issue and now discontinued). Additional subscribers may purchase any special reports listed in any issue. The maximum payment required in each case will be at the rate shown in the list. Unless otherwise indicated, the prices listed cover subscriptions through the end of the calendar year. Where the period covered is less than a full calendar year, the actual period covered is indicated. When more than one user subscribes to one of these reports at the beginning of a calendar year, the cost is prorated among all subscribers. If a new subscriber requests the report during the calendar year, the cost to him in most cases is the same as the cost to each original subscriber.

Cost-sharing arrangements with the original subscribers are sometimes suggested in such cases when the report is a costly one. Information furnished on a cost basis usually will not be publicly released by the Bureau without charge or at a reduced rate until after 6 months, but exceptions are made in the case of data which the Bureau regards as of general interest.

Subscribers who are interested in information which is not obtainable from the regularly published foreign trade statistics reports, and not listed as a special report, may inquire as to the possibility of obtaining the desired information and request a cost estimate for initiating a new special report. The Bureau's policy with regard to services furnished at cost is described more fully in an article entitled "Policy in Regard to Release of Foreign Trade and Shipping Statistics Reports Prepared for Private Organizations on a Cost Basis" in the November 1962 issue of Report FT 110. Reprints describing these policies are available upon request to the Foreign Trade Division, Bureau of the Census, Washington, D.C. 20233. Inquiries regarding the possibility of obtaining unpublished data, or requests for copies of existing special reports, should also be addressed to the Foreign Trade Division.

COVERAGE

Types of Shipments Included

The import statistics include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the U.S. armed forces for their own use are excluded. Shipments between the United States, its outlying possessions and Puerto Rico are not reported as U.S. imports, but imports into Puerto Rico from foreign countries are considered to be U.S. imports and are included in this report. Merchandise shipped under Customs custody through the United States in transit from one foreign country to another is not reported as imports. In general, the import statistics are a complete record of the physical movement of merchandise into the United States from foreign countries (except for intransit shipments), but there are some exclusions of items of relatively small importance in terms of total value, such as personal and household effects.

Imports for consumption shown in this report consist of merchandise entered into U.S. consumption channels; i.e., merchandise released from Customs custody immediately upon arrival, merchandise entered into bonded manufacturing warehouses (other than smelting and refining warehouses), merchandise withdrawn from bonded storage warehouses for release into domestic consumption channels, and imported ores and crude metals which have been processed in bonded smelting warehouses.

Monthly Coverage

It is the objective of the compiling procedures, insofar as possible, to include shipments in the imports for consumption statistics for the month during which the merchandise was imported which, in general, is based on the date the consumption entry or warehouse withdrawal document is filed.[1] However, because of processing problems, there has always been a carry-over of a small percentage of items from the proper month to a subsequent month (usually the month immediately following). The amount of this carry-over was increased a few years ago in order to take advantage of early release dates made possible with the use of electronic equipment.

RELATED INFORMATION

Information is also compiled for general imports, which represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival plus merchandise entered into bonded storage warehouses, bonded manufacturing warehouses, and bonded smelting and refining warehouses immediately upon arrival. General import figures covering total trade, country totals, and Customs district totals are published monthly. General import commodity statistics are not published but are available for reference purposes.

Trade between the United States, Puerto Rico, and United States possessions (not included as U.S. imports) is presented separately in Report FT 800. Statistics on the movement of intransit merchandise arriving at or leaving the United States by vessel (not included in this report) are also compiled and presented in summary form in Report FT 985. In addition, transportation statistics (showing shipping weight as well as value information) are compiled covering that part of general imports of merchandise which arrives by vessel. Summary vessel transportation statistics for both imports and exports are presented in Report FT 985. Effective with statistics for January 1962, information is being compiled on U.S. general imports and exports of merchandise by air. These data are published in Report FT785 (incorporates former Reports FT 380, FT 390, FT780, and FT 790) and FT 986. A more complete description of the coverage and presentation of the various types of statistics mentioned above will be found in the introductions to the specified reports.

SOURCE OF INFORMATION

The source of information for all of the imports included in this report is the import entry and warehouse withdrawal forms which importers are required to file with Collectors of Customs. Effective January 1, 1962, statistical factors of country of origin, net quantity, value, and commodity classification are verified or corrected as necessary by Customs examiners on all formal consumption and warehouse entries. This verification of statistical data is made at the time the examiner reviews invoices (and frequently samples of merchandise) for duty and other Customs purposes, and the statistical copy of the entry is corrected by the examiner at that time if he finds that it does not accurately reflect the information called for by the statistical requirements. Information on warehouse withdrawals which account for approximately 10 percent of the total value of imports for consumption, while not subject to the examiner verification procedure directly, should be improved indirectly (due to education of importers/brokers) by the verification of the warehouse entries to which they correspond.

VALUATION

The dollar value shown in the import statistics is defined generally as the market value in the foreign country, excluding the U.S. import duties, ocean freight and marine insurance.

COMMODITY INFORMATION

Commodity Classification

Effective with the statistics for February 1964, the basic import data, which are initially compiled in terms of the commodity classifications in Tariff Schedules of the United States Annotated (TSUSA), are being presented in this report in terms of a rearranged commodity classification system—Schedule A, Revised, Statistical Classification of Commodities Imported Into the United States, which is based on the Standard International Trade Classification, Revised (SITC)[2]. Schedule A, Revised, was constructed by the Bureau of the Census in order to provide for the summarization of data for the approximately 10,000 TSUSA classifications into about 2,200 commodity groupings which would be meaningful

[1]For shipments by vessel, merchandise is not included in the statistics prior to the date of formal entrance of the vessel (i.e., the date of the inward Customs manifest for the vessel).

[2]United Nations Statistical Papers, Series M, No. 34, 1961.

in terms of commodities important in the U.S. import trade and, at the same time, to provide data in terms of the Standard International Trade Classification outline which are comparable, insofar as possible, to the foreign trade statistics compiled by other trading nations.

Effective with the statistics for January 1965, some changes in Schedule A, Revised classifications have been made. An article showing these changes is included in the January 1965 issue of this report.

A general description of Schedule A, Revised, and its relation to the TSUSA classifications is presented in a special publication entitled "Changes in Presentation of United States Import Statistics Effective 1964." This publication also contains an outline of Schedule A, Revised which shows the TSUSA numbers included in the 7-digit Schedule A, Revised codes and gives abbreviated descriptions for the 7-digit classifications and for the 1-, 2-, 3-, and 4-digit levels of summarization. (Complete descriptions for the 1-, 2-, 3-, and 4-digit levels are presented in table 1 of this Report FT 125.) Descriptions at the 5-digit level are not furnished in the special publication since 5-digit summarizations of data are not presented in Report FT 125. However, users may total the data for 7-digit classifications having common first five digits to obtain summaries at the 5-digit level. For the convenience of users who wish to locate individual TSUSA numbers in the new classification system, the above-mentioned special publication contains a list in TSUSA number arrangement showing the Schedule A, Revised codes to which the TSUSA numbers were assigned. Further information regarding the SITC, the comparability of Schedule A, Revised to the SITC, and the disposition of SITC classifications in Schedule A, Revised is also contained in the special publication on changes in presentation of import statistics.

The amount and kind of detail in Schedule A, Revised, was determined on the basis of the estimated magnitude of trade in the various TSUSA commodities arranged within the framework of the SITC. The details of the Schedule A, Revised classification system are not considered to be final. Users of the statistics are invited to send comments or requests for changes in classifications to the Foreign Trade Division, Bureau of the Census. Such requests will be given consideration in connection with future modifications which will be made in the schedule.

Presentation of Data in Report FT 125

Table 1 of this report presents value totals for the 1-, 2-, 3-, and 4-digit levels of Schedule A, Revised commodity classification. Net quantity and value data for 7-digit Schedule A, Revised, commodity classifications by country of origin are presented in table 2. In this table, commodity by country data averaging less than $1,000 per month (on a cumulative year-to-date basis) are grouped together and shown as "Other Countries." Tables 3 and 4 present area by commodity and country by commodity data, respectively, in terms of the 1-, 2-, 3-, and 4-digit classification levels. At the 4-digit level only, area by commodity data in table 3 and country by commodity data in table 4, which average less than $10,000 per month (on a cumulative year-to-date basis) are combined and shown as code 9999, "Commodities Averaging Under $10,000 Per Month."

Availability of TSUSA Data

Information in terms of the 7-digit TSUSA classifications, under which the import statistics are initially compiled, is not presented as such in this report. (A few Schedule A, Revised, classifications represent individual TSUSA classifications.) However, current monthly statistics in TSUSA number by country of origin arrangement for both general imports and imports for consumption are contained in a machine tabulation, identified as IM 146, copies of which are available for use at Department of Commerce Field Offices in Boston, Chicago, Houston, Los Angeles, New Orleans, New York, Philadelphia, Seattle, and Santurce, Puerto Rico, and at the following locations:

Users who wish to do so may obtain data for individual TSUSA parts or subparts in the form of copies of excerpts from the above-mentioned tabulation at a nominal cost. A sample report which illustrates the content and arrangement of the excerpts, information regarding subscription prices, and an order blank for convenience in placing subscriptions for this special service may also be obtained from the Bureau of the Census upon request.

In addition to tabulation IM 146 mentioned above, information primarily in TSUSA number by country of origin by Customs district of entry arrangement is presented in tabulation IM 145, which is on file for reference use at the above-mentioned offices in Washington, D.C. and New York and at the Department of Commerce Field Office in San Francisco, California.

COUNTRY OF ORIGIN

The country reported in the statistics as the country of origin is defined as the country where the merchandise was grown, mined, or manufactured. In instances where it is known that the country of origin cannot be determined, the transactions are credited to the country of shipment.

In table 2 of this report, which presents data in commodity by country arrangement, and in table 4, in country by commodity arrangement, countries are presented in the order of Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered to be a part of the country for

statistical purposes. Schedule C is published as Annex B in Tariff Schedules of the United States Annotated. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

Table 3 of this report presents data on imports from major geographic trading areas in terms of 1-, 2-, 3-, and 4-digit commodity classifications. The areas represent groupings of individual Schedule C countries with the exception of Canada, the United Kingdom, and Japan which are treated as separate areas in table 3. Commodity data for Canada, the United Kingdom, and Japan are not included in table 3 but are presented in table 4 which contains data in country by commodity arrangement. A list showing the major geographic trading areas and the individual countries included in each area appears in the January 1965 issue of this report. Also, following table 4, there is an index of areas and countries which shows the countries included in each area.

ESTIMATED DATA FOR LOW-VALUED IMPORTS

Since January 1958, data on imports valued under $100, reported on formal immediate consumption entries, and imports reported on informal entries (by definition, valued not more than $250) have been estimated from a 1-percent sample and reported under an arbitrary commodity number (Schedule A number 9999 500, from January 1958 through August 1963, TSUSA number 999.9500, from September through December 1963). These estimates have been excluded from other individual commodity classifications. In addition, effective January 1963, estimated data on warehouse withdrawals for consumption valued under $100 are also included with the other low-valued imports under the above-mentioned arbitrary commodity numbers and excluded from the other individual commodity classifications. In this report, value estimates based on a 1-percent sample of these low-valued shipments are shown separately under commodity codes 9900000, 9900, 990 and 99, and are also included in the section 9 total, the country and area totals, and the global total. The statistics for commodity codes from which the low-valued shipments are excluded are undercounted to the extent that such low-valued shipments of the particular commodity are made. The total value so excluded amounts to about one percent of the monthly import total. Although subject to considerable variability,[3] particularly where the estimated amounts are relatively small, these estimates for low-valued imports may be of some interest as a rough guide to the general magnitude of the effect which the exclusion of the items has on the commodity data for individual areas or countries.

For any country where the low-value estimate may make up a significant portion of the country total, the sampling variability of the estimate may need to be considered in connection with the reliability of the country total. The extent to which the estimates might not agree with a complete tabulation of the shipments depends on the number of documents which fall in the sample. In table 2, which contains 7-digit commodity by country data, the number of documents in the sample is shown by country under commodity code 9900000 in the net quantity columns. In the tables containing data in area by commodity and country by commodity arrangements, figures indicating the number in sample for the current month and the cumulative year to date are shown, respectively, following the description for commodity codes 99, 990, and 9900. The number in sample can be used in conjunction with the following table to obtain an estimate of the sampling variability on a two-times-out-of-three basis.

The table below indicates the degree of reliability to be attached to a specified value.

If the number of documents indicated from the sample is:	Then the chances are better than 2 out of 3 that a complete tabulation would have resulted in a value figure between

[1]The actual value of shipments cannot be less than 1/100 of the estimated amount shown in the report. Figures in this column can be ignored if use of them for a particular total would bring the lower limit below 1/100 of the estimate.

[2]If the number of documents in the sample is greater than 499, sampling variability for the estimates of the low-valued shipments will generally be less than 7 percent.

[3]The estimated total for low-valued imports reported under commodity number 9900000 is subject to a sampling variability of 3 to 4 percent. This means that the chances are 2 out of 3 that a complete tabulation would have resulted in a figure that differed from the estimate by no more than 3 to 4 percent. The estimates by country under commodity number 9900000 are subject to greater sampling variability—around 10 percent for countries with about 200 low-valued shipments in the sample; around 20 percent for countries with about 75 shipments in the sample; and over 20 percent for smaller sample sizes.

The following will illustrate the use of the table:

Suppose an estimated value of $310,800 is based on 45 documents in the sample. Referring to the line 40-49, one notes the values $79,800 and $99,000. This means that the chances are better than 2 out of 3 that a complete tabulation would have resulted in a figure between $231,000 ($310,800 reduced by $79,800) and $409,800 ($310,800 increased by $99,000). Similarly, a country total of $15,957,189 which represents a total of $15,559,689 for the fully compiled data plus an estimate of $397,500 for group 990 based upon 75 shipments in the sample would be between $15,855,189 ($15,957,189 reduced by $102,000) and $16,077,189 ($15,957,189 increased by $120,000).

In the event a user desires to combine two or more figures which are estimated values, or which include estimated values, the variability of the combined total can be determined by merely adding the sample size for each estimated value and then referring to the line on the reliability table applicable to the combined sample size.

REVISIONS IN PREVIOUS MONTHS' REPORTS

Prior to January 1964, revisions to data for earlier months of the current year and the previous year were published in the March, June, September, and December issues of Report FT 110. Under the revision policy which became effective January 1964, it is planned that corrections to the previous year's statistics will be published only in the June issue of this report, while corrections to the current year's statistics will be published only in the December issue of this report. It is possible that individual exceptions to this policy may be made where extremely significant revisions are involved. Corrections for the current or previous years which are not published in this report will be held for reflection in the figures to be published in Foreign Commerce and Navigation of the United States for the particular year.

SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics will be found in the foreword to the latest edition of Foreign Commerce and Navigation of the United States. (Copies are available for reference at public libraries.) Supplementary information and explanations of interest to users of foreign trade statistics (such as announcements of changes in types of shipments covered by current statistics, unusual shipments, problems of valuation and classification, changes in statistical procedures, etc.) are included as special announcements in current issues of this report and other statistical publications. Copies of such announcements are also attached to reference copies of tabulations where appropriate. Reports providing additional detail compiled but not published can be obtained on a cost basis. For further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

DINO S. VILLA

United States import statistics are compiled from information verified by Customs Examiners on import entries filed with Customs by importers. Under the direction of Lester D. Johnson, Acting Commissioner of Customs, the primary responsibility for the verification of import statistical information is assigned to the field and headquarters staff of the Division of Appraisement Administration.

SUGGESTED BRIEF CITATION

U.S. Bureau of the Census. U.S. Imports of Merchandise for Consumption, Report FT 125, February 1965. Washington, D.C. June 1965.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, or any Department of Commerce field office. Price: $10 per year domestic, $2.25 additional for foreign mailing, $1.50 single copy.

GENERAL EXPLANATION

COVERAGE

Types of Shipments Included

The import statistics include government as well as nongovernment shipments of merchandise from foreign countries to the United States. However, American goods returned by the U.S. armed forces for their own use are excluded. Shipments between the United States, its outlying possessions and Puerto Rico are not reported as U.S. imports, but imports into Puerto Rico from foreign countries are considered to be U.S. imports and are included in this report. Merchandise shipped under Customs custody through the United States in transit from one foreign country to another is not reported as imports. In general, the import statistics are a complete record of the physical movement of merchandise into the United States from foreign countries (except for intransit shipments), but there are some exclusions of items of relatively small importance in terms of total value, such as personal and household effects.

Imports for consumption shown in this report consist of merchandise entered into U.S. consumption channels; i.e., merchandise released from Customs custody immediately upon arrival, merchandise entered into bonded manufacturing warehouses (other than smelting and refining warehouses), merchandise withdrawn from bonded storage warehouses for release into domestic consumption channels, and imported ores and crude metals which have been processed in bonded smelting warehouses.

Monthly Coverage

It is the objective of the compiling procedures, insofar as possible, to include shipments in the imports for consumption statistics for the month during which the merchandise was imported which, in general, is based on the date the consumption entry or warehouse withdrawal document is filed.[1] However, because of processing problems, there has always been a carry-over of a small percentage of items from the proper month to a subsequent month (usually the month immediately following). The amount of this carry-over was increased a few years ago in order to take advantage of early release dates made possible with the use of electronic equipment.

RELATED INFORMATION

Information is also compiled for general imports, which represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival plus merchandise entered into bonded storage warehouses, bonded manufacturing warehouses, and bonded smelting and refining warehouses immediately upon arrival. General import figures covering total trade, country totals, and Customs district totals are published monthly. General import commodity statistics are not published but are available for reference purposes.

Trade between the United States, Puerto Rico, and United States possessions (not included as U.S. imports) is presented separately in Report FT 800. Statistics on the movement of intransit merchandise arriving at or leaving the United States by vessel (not included in this report) are also compiled and presented in summary form in Report FT 985. In addition, transportation statistics (showing shipping weight as well as value information) are compiled covering that part of general imports of merchandise which arrives by vessel. Summary vessel transportation statistics for both imports and exports are presented in Report FT 985. Effective with statistics for January 1962, information is being compiled on U.S. general imports and exports of merchandise by air. These data are published in Report FT785 (incorporates former Reports FT 380, FT 390, FT780, and FT 790) and FT 986. A more complete description of the coverage and presentation of the various types of statistics mentioned above will be found in the introductions to the specified reports.

SOURCE OF INFORMATION

The source of information for all of the imports included in this report is the import entry and warehouse withdrawal forms which importers are required to file with Collectors of Customs. Effective January 1, 1962, statistical factors of country of origin, net quantity, value, and commodity classification are verified or corrected as necessary by Customs examiners on all formal consumption and warehouse entries. This verification of statistical data is made at the time the examiner reviews invoices (and frequently samples of merchandise) for duty and other Customs purposes, and the statistical copy of the entry is corrected by the examiner at that time if he finds that it does not accurately reflect the information called for by the statistical requirements. Information on warehouse withdrawals which account for approximately 10 percent of the total value of imports for consumption, while not subject to the examiner verification procedure directly, should be improved indirectly (due to education of importers/brokers) by the verification of the warehouse entries to which they correspond.

VALUATION

The dollar value shown in the import statistics is defined generally as the market value in the foreign country, excluding the U.S. import duties, ocean freight and marine insurance.

COMMODITY INFORMATION

Commodity Classification

Effective with the statistics for February 1964, the basic import data, which are initially compiled in terms of the commodity classifications in Tariff Schedules of the United States Annotated (TSUSA), are being presented in this report in terms of a rearranged commodity classification system—Schedule A, Revised, Statistical Classification of Commodities Imported Into the United States, which is based on the Standard International Trade Classification, Revised (SITC)[2]. Schedule A, Revised, was constructed by the Bureau of the Census in order to provide for the summarization of data for the approximately 10,000 TSUSA classifications into about 2,200 commodity groupings which would be meaningful

[1]For shipments by vessel, merchandise is not included in the statistics prior to the date of formal entrance of the vessel (i.e., the date of the inward Customs manifest for the vessel).

[2]United Nations Statistical Papers, Series M, No. 34, 1961.

in terms of commodities important in the U.S. import trade and, at the same time, to provide data in terms of the Standard International Trade Classification outline which are comparable, insofar as possible, to the foreign trade statistics compiled by other trading nations.

Effective with the statistics for January 1965, some changes in Schedule A, Revised classifications have been made. An article showing these changes is included in the January 1965 issue of this report.

A general description of Schedule A, Revised, and its relation to the TSUSA classifications is presented in a special publication entitled "Changes in Presentation of United States Import Statistics Effective 1964." This publication also contains an outline of Schedule A, Revised which shows the TSUSA numbers included in the 7-digit Schedule A, Revised codes and gives abbreviated descriptions for the 7-digit classifications and for the 1-, 2-, 3-, and 4-digit levels of summarization. (Complete descriptions for the 1-, 2-, 3-, and 4-digit levels are presented in table 1 of this Report FT 125.) Descriptions at the 5-digit level are not furnished in the special publication since 5-digit summarizations of data are not presented in Report FT 125. However, users may total the data for 7-digit classifications having common first five digits to obtain summaries at the 5-digit level. For the convenience of users who wish to locate individual TSUSA numbers in the new classification system, the above-mentioned special publication contains a list in TSUSA number arrangement showing the Schedule A, Revised codes to which the TSUSA numbers were assigned. Further information regarding the SITC, the comparability of Schedule A, Revised to the SITC, and the disposition of SITC classifications in Schedule A, Revised is also contained in the special publication on changes in presentation of import statistics.

The amount and kind of detail in Schedule A, Revised, was determined on the basis of the estimated magnitude of trade in the various TSUSA commodities arranged within the framework of the SITC. The details of the Schedule A, Revised classification system are not considered to be final. Users of the statistics are invited to send comments or requests for changes in classifications to the Foreign Trade Division, Bureau of the Census. Such requests will be given consideration in connection with future modifications which will be made in the schedule.

Presentation of Data in Report FT 125

Table 1 of this report presents value totals for the 1-, 2-, 3-, and 4-digit levels of Schedule A, Revised commodity classification. Net quantity and value data for 7-digit Schedule A, Revised, commodity classifications by country of origin are presented in table 2. In this table, commodity by country data averaging less than $1,000 per month (on a cumulative year-to-date basis) are grouped together and shown as "Other Countries." Tables 3 and 4 present area by commodity and country by commodity data, respectively, in terms of the 1-, 2-, 3-, and 4-digit classification levels. At the 4-digit level only, area by commodity data in table 3 and country by commodity data in table 4, which average less than $10,000 per month (on a cumulative year-to-date basis) are combined and shown as code 9999, "Commodities Averaging Under $10,000 Per Month."

Availability of TSUSA Data

Information in terms of the 7-digit TSUSA classifications, under which the import statistics are initially compiled, is not presented as such in this report. (A few Schedule A, Revised, classifications represent individual TSUSA classifications.) However, current monthly statistics in TSUSA number by country of origin arrangement for both general imports and imports for consumption are contained in a machine tabulation, identified as IM 146, copies of which are available for use at Department of Commerce Field Offices in Boston, Chicago, Houston, Los Angeles, New Orleans, New York, Philadelphia, Seattle, and Santurce, Puerto Rico, and at the following locations:

Users who wish to do so may obtain data for individual TSUSA parts or subparts in the form of copies of excerpts from the above-mentioned tabulation at a nominal cost. A sample report which illustrates the content and arrangement of the excerpts, information regarding subscription prices, and an order blank for convenience in placing subscriptions for this special service may also be obtained from the Bureau of the Census upon request.

In addition to tabulation IM 146 mentioned above, information primarily in TSUSA number by country of origin by Customs district of entry arrangement is presented in tabulation IM 145, which is on file for reference use at the above-mentioned offices in Washington, D.C. and New York and at the Department of Commerce Field Office in San Francisco, California.

COUNTRY OF ORIGIN

The country reported in the statistics as the country of origin is defined as the country where the merchandise was grown, mined, or manufactured. In instances where it is known that the country of origin cannot be determined, the transactions are credited to the country of shipment.

In table 2 of this report, which presents data in commodity by country arrangement, and in table 4, in country by commodity arrangement, countries are presented in the order of Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered to be a part of the country for

statistical purposes. Schedule C is published as Annex B in Tariff Schedules of the United States Annotated. A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

Table 3 of this report presents data on imports from major geographic trading areas in terms of 1-, 2-, 3-, and 4-digit commodity classifications. The areas represent groupings of individual Schedule C countries with the exception of Canada, the United Kingdom, and Japan which are treated as separate areas in table 3. Commodity data for Canada, the United Kingdom, and Japan are not included in table 3 but are presented in table 4 which contains data in country by commodity arrangement. A list showing the major geographic trading areas and the individual countries included in each area appears in the January 1965 issue of this report. Also, following table 4, there is an index of areas and countries which shows the countries included in each area.

ESTIMATED DATA FOR LOW-VALUED IMPORTS

Since January 1958, data on imports valued under $100, reported on formal immediate consumption entries, and imports reported on informal entries (by definition, valued not more than $250) have been estimated from a 1-percent sample and reported under an arbitrary commodity number (Schedule A number 9999 500, from January 1958 through August 1963, TSUSA number 999.9500, from September through December 1963). These estimates have been excluded from other individual commodity classifications. In addition, effective January 1963, estimated data on warehouse withdrawals for consumption valued under $100 are also included with the other low-valued imports under the above-mentioned arbitrary commodity numbers and excluded from the other individual commodity classifications. In this report, value estimates based on a 1-percent sample of these low-valued shipments are shown separately under commodity codes 9900000, 9900, 990 and 99, and are also included in the section 9 total, the country and area totals, and the global total. The statistics for commodity codes from which the low-valued shipments are excluded are undercounted to the extent that such low-valued shipments of the particular commodity are made. The total value so excluded amounts to about one percent of the monthly import total. Although subject to considerable variability,[3] particularly where the estimated amounts are relatively small, these estimates for low-valued imports may be of some interest as a rough guide to the general magnitude of the effect which the exclusion of the items has on the commodity data for individual areas or countries.

For any country where the low-value estimate may make up a significant portion of the country total, the sampling variability of the estimate may need to be considered in connection with the reliability of the country total. The extent to which the estimates might not agree with a complete tabulation of the shipments depends on the number of documents which fall in the sample. In table 2, which contains 7-digit commodity by country data, the number of documents in the sample is shown by country under commodity code 9900000 in the net quantity columns. In the tables containing data in area by commodity and country by commodity arrangements, figures indicating the number in sample for the current month and the cumulative year to date are shown, respectively, following the description for commodity codes 99, 990, and 9900. The number in sample can be used in conjunction with the following table to obtain an estimate of the sampling variability on a two-times-out-of-three basis.

The table below indicates the degree of reliability to be attached to a specified value.

If the number of documents indicated from the sample is:	Then the chances are better than 2 out of 3 that a complete tabulation would have resulted in a value figure between

[1]The actual value of shipments cannot be less than 1/100 of the estimated amount shown in the report. Figures in this column can be ignored if use of them for a particular total would bring the lower limit below 1/100 of the estimate.

[2]If the number of documents in the sample is greater than 499, sampling variability for the estimates of the low-valued shipments will generally be less than 7 percent.

[3]The estimated total for low-valued imports reported under commodity number 9900000 is subject to a sampling variability of 3 to 4 percent. This means that the chances are 2 out of 3 that a complete tabulation would have resulted in a figure that differed from the estimate by no more than 3 to 4 percent. The estimates by country under commodity number 9900000 are subject to greater sampling variability—around 10 percent for countries with about 200 low-valued shipments in the sample; around 20 percent for countries with about 75 shipments in the sample; and over 20 percent for smaller sample sizes.

The following will illustrate the use of the table:

Suppose an estimated value of $310,800 is based on 45 documents in the sample. Referring to the line 40-49, one notes the values $79,800 and $99,000. This means that the chances are better than 2 out of 3 that a complete tabulation would have resulted in a figure between $231,000 ($310,800 reduced by $79,800) and $409,800 ($310,800 increased by $99,000). Similarly, a country total of $15,957,189 which represents a total of $15,559,689 for the fully compiled data plus an estimate of $397,500 for group 990 based upon 75 shipments in the sample would be between $15,855,189 ($15,957,189 reduced by $102,000) and $16,077,189 ($15,957,189 increased by $120,000).

In the event a user desires to combine two or more figures which are estimated values, or which include estimated values, the variability of the combined total can be determined by merely adding the sample size for each estimated value and then referring to the line on the reliability table applicable to the combined sample size.

REVISIONS IN PREVIOUS MONTHS' REPORTS

Prior to January 1964, revisions to data for earlier months of the current year and the previous year were published in the March, June, September, and December issues of Report FT 110. Under the revision policy which became effective January 1964, it is planned that corrections to the previous year's statistics will be published only in the June issue of this report, while corrections to the current year's statistics will be published only in the December issue of this report. It is possible that individual exceptions to this policy may be made where extremely significant revisions are involved. Corrections for the current or previous years which are not published in this report will be held for reflection in the figures to be published in Foreign Commerce and Navigation of the United States for the particular year.

SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics will be found in the foreword to the latest edition of Foreign Commerce and Navigation of the United States. (Copies are available for reference at public libraries.) Supplementary information and explanations of interest to users of foreign trade statistics (such as announcements of changes in types of shipments covered by current statistics, unusual shipments, problems of valuation and classification, changes in statistical procedures, etc.) are included as special announcements in current issues of this report and other statistical publications. Copies of such announcements are also attached to reference copies of tabulations where appropriate. Reports providing additional detail compiled but not published can be obtained on a cost basis. For further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.
